3air

Connectivity and Banking for the Next Billion

3air will provide a 360 package of services to facilitate leveling the field for emerging economies with:
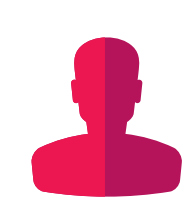

Digital Identities
Identities Powered By Blockchain

DeFi & Banking
Banking the Unbanked!

Digital TV & IP Telephony
Business (or Pleasure!) with No Interruptions

NFTs & Ownership
Subscription NFTs in the Service of Connectivity
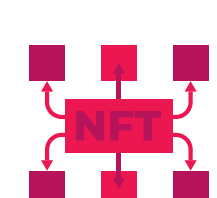

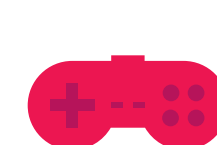

Education & Empowerment
Learn, Earn & Access Income-Generating Opportunities

Limitless Potential

The world's first blockchain platform that enables individuals and businesses to thrive on Web3 by providing broadband internet connectivity. Real world problems require real world utility projects.

3air uses proprietary technology to build broadband infrastructure where others have failed, especially in densely populated areas of the world. 3air will provide connectivity to 3 billion people who cannot access blockchain services because they are not connected to the internet.

TOKEN UTILITY & REVENUE MODEL

The tokens will enable users to participate in the 3air economy. End users will be encouraged to hold and use 3air tokens with functions such as **Staking, Governance, Rewards, Referral bonuses, Microloans, Own-Your-Own-Hardware incentives** and **Bandwidth Sharing.**

The main revenue stream will be the fees paid by Internet Service Providers and K3.

TOKENOMICS

6% Liquidity
12% Farming/ Staking

Total supply: **830,000 3AIR** (Fixed supply)
Initial MC: **$241,000**
Valuation **@IDO: $54M**
Launch date: **22 September, 2022**

3AIR FOR DIFFERENT STAKEHOLDERS

Consumers

3air provides a cash-to-crypto onboarding ramp to bring new users online and into crypto, who then receive their unique Digital Identity and use it to transact online. They will have access to all the primary platform's services - broadband internet access and banking - and secondary services - identification, TV, telephony, education material, microloans, income-generating opportunities and more. They will also enjoy the innate perks of the blockchain and crypto space, including staking, tokenized reward systems, governance rights and, most importantly, all of these wrapped in privacy, security and transparency.

Businesses

Businesses using 3air will finally be able to take full advantage of internet services and compete with their counterparts in more technologically advanced regions of the world. They will also be able to access functionalities like Internet of Things, IP telephony, banking and lending solutions, and broadband sharing to their customers.

ISPs

Internet Service Providers will be able to secure access to an extensive user base, created exclusively for them by 3air. They will leverage our patented infrastructure technology to reach a market that would otherwise be far out of reach and use our novel, all-in-one Telecom Management System. They will be able to generate additional revenue with secondary services, such as DIDs.

Ecosystem Partners

Partners will be featured to all users accessing the internet via the 3air platform as recommended resources to navigate through the blockchain space and categorized according to their utility.
